Title	Environmental Planning Instrument - Key Sites
Alternative title(s)	EPI - Key sites
Abstract	This spatial dataset identifies land allocated as Key Sites requiring future development to meet standards of design excellence as designated by the relevant NSW environmental planning instrument (EPI). The specific EPI which defines the planning requirement is described in the dataset next to the airport noise value and this EPI can be investigated on the NSW legislation website
	Contact data.broker@environment.nsw.gov.au for a data package (shapefile).

a d P G D d s s d ir a v r q p	his spatial dataset reflects the current planning legislation in NSW in particular the maps nd legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The ata production usually occurs in conjunction with the development of the Environmental anning Instrument (EPI) it is connected to. Original data inputs are produced by Local overnment or the Department according to map and data standards developed by the epartment and published externally via the website. These data inputs are checked by ata and cartographic staff as well as planning staff internally against the map and data andards as well as for accurate content. Once the planning instrument is notified, the input ata will be incorporated into the relevant LEP datasets. The quality management processes volved in the data production to this point are routinely screened by internal and external uditors for certification under ISO 9001 - Quality Management Systems. At this point the arious datasets are then combined into a new normalised data schema to suit the equirements of the online Planning Viewer. This occurs via various automated ETL rocesses. Although every care is taken in ETL processes to maintain accuracy sometimes fferences between inputs and final normalised data can occur
