

Title	Repealed - State Environmental Planning Policy (Koala Habitat Protection) 2019
Alternative title(s)	Koala SEPP
Abstract	<p>This is a repealed State Environmental Planning Policy and has been superseded by the State Environmental Planning Policy (Koala Habitat Protection) 2020.</p> <p>This dataset contains map data relevant to Site Investigation Area for Koala Plans of Management Map. The description and method for this layer is detailed below.</p> <p><i>Site Investigation Area for Koala Plans of Management Map</i></p> <p>This map identifies areas that are likely to have koala use trees, as well as environmental features such as soil type, topography and climate suitable for sustaining koalas. This map was developed from the Koala Habitat Information Base. The map does not show core koala habitat, and is only relevant as an investigation area, when councils resolve to prepare a Koala Plan of Management. Outside of this process, the map is not relevant and is not used.</p> <p>The map only captures land in the LGAs listed in schedule 1 of the SEPP. The map also excludes the lands that the SEPP does not apply to, such as national parks and state forests. The Site Investigation Area Map is not publicly available. To access this map, please contact your local council or the Department of Planning, Industry and Environment.</p> <p>Contact data.broker@environment.nsw.gov.au for more information.</p>

Purpose	This Policy aims to encourage the conservation and management of areas of natural vegetation that provide habitat for koalas to support a permanent free-living population over their present range and reverse the current trend of koala population decline.
Status	Completed
Spatial representation

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
