Purpose	The aims of this plan are:(a) to define objectives for the Homebush Bay Area which encourage co-ordinated and environmentally sensitive development of the Homebush Bay Area, and (b) to guide and co-ordinate the development of the Homebush Bay Area, and (c) to replace planning instruments previously applying to the Homebush Bay Area with a simplified planning framework, and (d) to provide flexible development controls by allowing a wide mix of uses in the Homebush Bay Area, and (e) to provide for the preparation of detailed planning controls to complement the flexible controls in this plan, and (f) to facilitate the development and management of Sydney Olympic Park by the Sydney Olympic Park Authority based on: (i) master plans (whether adopted by the Minister under this Plan or approved by the Minister under section 18 of the Sydney Olympic Park Authority Act 2001), and (ii) other guidelines and management strategies adopted by the Sydney Olympic Park Authority for the management of Sydney Olympic Park, and (g) to provide for public consultation in the planning and development of the Homebush Bay Area.

Lineage This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
