

Title	Environmental Planning Instrument - Acid Sulfate Soils
Alternative title(s)	EPI ASS
Abstract	<p>This spatial dataset identifies areas of land showing the extent of acid sulfate soils. Acid sulfate soils have been classified into 5 different classes based on the likelihood of the acid sulfate soils being present in particular areas and at certain depths.</p> <ul style="list-style-type: none"> • Class 1: Acid sulfate soils in a class 1 area are likely to be found on and below the natural ground surface. • Class 2 : Acid sulfate soils in a class 2 area are likely to be found below the natural ground surface. • Class 3: Acid sulfate soils in a class 3 area are likely to be found beyond 1 metre below the natural ground surface. • Class 4: Acid sulfate soils in a class 4 area are likely to be found beyond 2 metres below the natural ground surface. • Class 5: Acid sulfate soils are not typically found in Class 5 areas. Areas classified as Class 5 are located within 500 metres on adjacent class 1,2,3 or 4 land. <p>Contact data.broker@environment.nsw.gov.au for a data package (shapefile)</p>

ArcGIS REST Services Directory - EPI Protection Layers	<p>Name: ArcGIS REST Services Directory - EPI Protection Layers</p> <p>Protocol: WWW:DOWNLOAD-1.0-http--download</p> <p>Description:</p> <p>The URL directs users to the ArcGIS Server service directory of the EPI Protection Layers - a view of REST API in HTML and allows users to: Browse the list of Layers. View Data for e.g. using ArcGIS.com View Map Service metadata: Initial/Full Extent, units, supported format types etc., Drill down to individual tables/layers, view schema and run queries</p> <p>Function: download</p>

[WFS - Acid Sulfate Soils](#)

Name: WFS - Acid Sulfate Soils

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

The WFS service exposes the following Protection layers:

- Acid Sulfate Soils
- Airport Noises
- Drinking Water Catchment
- Groundwater Vulnerability
- Mineral and Resource Land
- Obstacle Limitation Surface
- Riparian Lands and Watercourses
- Salinity
- Scenic Protection Land
- Terrestrial Biodiversity
- Wetlands
- Environmentally Sensitive Land

Function: download

[Request Spatial Data](#)

Name: Request Spatial Data

Function: download

[ESRI style file](#)

Name: ESRI style file

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

This is the ESRI style file to be used to apply symbology to the layer. The attribute used for the styling is LAY_CLASS. You can find more details on how to work with Style files here:

<http://desktop.arcgis.com/en/arcmap/10.3/map/styles-and-symbols/a-quick-tour-of-symbols-and-styles.htm>

Function: download

[OGC SLD](#)

Name: OGC SLD

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

This is the OGC SLD layer descriptor file to be used to apply symbology schemes to the layer. The attribute used for the styling is LAY_CLASS. You can find more details on how to work with Style layered descriptor files here:

https://digimap.edina.ac.uk/webhelp/digimapgis/qgis/standard_qgis_functions/applying_style_files.htm

[JSON - Acid Sulfate Soils](#)

Name: JSON - Acid Sulfate Soils

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

The WMS service exposes the following Protection layers:

- Acid Sulfate Soils
- Airport Noises
- Drinking Water Catchment
- Groundwater Vulnerability
- Mineral and Resource Land
- Obstacle Limitation Surface
- Riparian Lands and Watercourses
- Salinity
- Scenic Protection Land
- Terrestrial Biodiversity
- Wetlands
- Environmentally Sensitive Land

Lineage	This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
