Title Environmental Planning Instrument - Foreshore Building Line **Alternative** EPI - FBL title(s) **Abstract** This data identifies the foreshore building line. Land between this line and the high water mark of the nearest natural waterbody comprises the foreshore area. Development in the foreshore area is subject to an "Additional Local Provision" which can be found in Part 6 or Part 7 of the Local Environment Plan Contact data.broker@environment.nsw.gov.au for a data package (shapefile) Resource locator Name: Data Quality Statement **Data Quality Statement** Protocol: WWW:DOWNLOAD-1.0-http--download Description: Data quality statement for Environmental Planning Instrument - Foreshore Building Function: download **WMS** Name: WMS Protocol: WWW:DOWNLOAD-1.0-http--download Description: The WMS service exposes the following EPI Development Control layers: • Dwelling Density • Foreshore Building Line • Local Provisions Function: download **ArcGIS REST** Name: ArcGIS REST Services Directory - EPI Development Control Layers **Services** Protocol: WWW:DOWNLOAD-1.0-http--download **Directory - EPI** Development Description: **Control Layers** The URL directs users to the ArcGIS Server service directory of the EPI Development Control Layers - a view of REST API in HTML and allows users to: Browse the list of Layers. Purpose	This spatial dataset identifies the foreshore building line (FBL). The FBL highlights the distance landward from the Deed High Water Mark (DHWM) where buildings and/or structures or other forms of development can occur.

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant LEP datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur
