Title	Environmental Planning Instrument - Land Reclassification
Alternative title(s)	EPI - RPL
Abstract	This spatial dataset identifies public land classified or reclassified as either 'operational land' or 'community land' as designated by the relevant NSW environmental planning instrument (EPI). The specific EPI which defines the planning requirement is described in the dataset and this EPI can be investigated on the NSW legislation website

a d P G D d s s d ir a v r q p	s spatial dataset reflects the current planning legislation in NSW in particular the maps d legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The ta production usually occurs in conjunction with the development of the Environmental nning Instrument (EPI) it is connected to. Original data inputs are produced by Local vernment or the Department according to map and data standards developed by the partment and published externally via the website. These data inputs are checked by ta and cartographic staff as well as planning staff internally against the map and data ndards as well as for accurate content. Once the planning instrument is notified, the input ta will be incorporated into the relevant LEP datasets. The quality management processes olved in the data production to this point are routinely screened by internal and external ditors for certification under ISO 9001 - Quality Management Systems. At this point the rious datasets are then combined into a new normalised data schema to suit the quirements of the online Planning Viewer. This occurs via various automated ETL pocesses. Although every care is taken in ETL processes to maintain accuracy sometimes ferences between inputs and final normalised data can occur
