

Title	Environmental Planning Instrument - Native Vegetation Protection
Alternative title(s)	EPI - Native Veg Protection
Abstract	The dataset contains Native Veg Protection for the Environmental Planning Instrument.
Resource locator

Presentation form	Map digital
Edition	1
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://www.planningportal.nsw.gov.au/opendata/dataset/4a7c7d3e-81e0-45d0-afbb-2c67a1093a8f
Purpose	This Policy aims to encourage the proper conservation and management of areas of native vegetation:(a) by requiring the preparation of plans of management before development consent can be granted in relation to areas of native vegetation, and (b) by encouraging the identification of areas of native vegetation, and (c) by encouraging the inclusion of native vegetation areas of in environment protection zones.
Status	Completed

Spatial representation	
Type	vector
Geometric Object Type	surface

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
