#### <u>ec5efd522a01</u> (1) This Policy aims to require environmental assessment under Part 4 of the Purpose Environmental Planning and Assessment Act 1979 of development for the purpose of artificial waterbodies (other than minor works in restricted locations) that will be carried out under farm plans that implement land and water management plans. Consequently, that development will be able to be lawfully carried out only with development consent granted by the council of the local government area in which it will be carried out and only after a statement of environmental effects or (in the case of large works or those on environmentally sensitive land) only after an environmental impact statement has been considered by the council. (2) This Policy also aims to allow the carrying out of development without development consent for the purpose of the following:(a) small artificial waterbodies, such as those used for the purpose of storing water run-off for reuse, but only in locations restricted by this Policy, (b) routine maintenance of irrigation channels, and the use of land for related access, whether or not a land and water management plan applies to the land concerned,(c) emergency work on irrigation channels by irrigation corporations and their use of land for related access, whether or not a land and water management plan applies to the land concerned. # Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
