Repealed - State Environmental Planning Policy (Infrastructure) 2007				
SEPP (Infrastructure) 2007				
This is a repealed State Environmental Planning Policy and has been superseded by the State Environmental Planning Policy (Transport and Infrastructure) 2021 as part of the Department's initiative to consolidate State Environmental Planning Policies to simplify and provide certainty to the planning system.

The aim of this Policy is to facilitate the effective delivery of infrastructure across the State by:(a) improving regulatory certainty and efficiency through a consistent planning regime for infrastructure and the provision of services, and (b) providing greater flexibility in the location of infrastructure and service facilities, and (c) allowing for the efficient development, redevelopment or disposal of surplus government owned land, and (d) identifying the <code>]environmental]</code> assessment category into which different types of infrastructure and services development fall (including identifying certain development of minimal <code>]environmental</code> impact as exempt development), and (e) identifying matters to be considered in the assessment of development adjacent to

a d P C d s d d ii a v r p	This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The lata production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by lata and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input lata will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the equirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes lifferences between inputs and final normalised data can occur.
