Edition	2016
Dataset URI	https://www.planningportal.nsw.gov.au/opendata/dataset/7cebdcc3-d46e-4d93-9842-cc0edd785c7a
Purpose	<p>This plan aims:(a) to facilitate the development of extractive resources in proximity to the population of the Sydney Metropolitan Area by identifying land which contains extractive material of regional significance, and (b) to permit, with the consent of the council, development for the purpose of extractive industries on land described in Schedule 1 or 2, and (c) to ensure consideration is given to the impact of encroaching development on the ability of extractive industries to realise their full potential, and (d) to promote the carrying out of development for the purpose of extractive industries in an environmentally acceptable manner, and (e) to prohibit development for the purpose of extractive industry on the land described in Schedule 3 in the Macdonald, Colo, Hawkesbury and Nepean Rivers, being land which is environmentally sensitive.</p>
Status	Obsolete
Spatial representation	

Type	vector
Geometric Object Type	surface
Spatial reference system	
Code identifying the spatial reference system	4283
Equivalent scale	1:None
Topic category	environment
Keyword set	
keyword value	HUMAN-ENVIRONMENT-Planning
Originating controlled vocabulary	
Title	ANZLIC Search Words
Reference date	2008-05-16
Geographic location	
Vertical extent information	
Minimum value	-100
Maximum value	2228

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
